INDEX TO ASSESSMENT REPORTS 1982

INTRODUCTION

Report 83-2 is a bibliographic index to the mineral exploration assessment reports of the Nova Scotia Department of Mines and Energy that became open (i.e. non-confidential) during 1982. This index provides sources of assessment report data, by title only; the actual report data itself must be obtained from the reports cited in this index. Report 83-2 is composed of two parts: Part I is the index to assessment report titles arranged by map sheet; Part II is the index to assessment report titles arranged alphabetically by exploration companies and/or licensees responsible for the reports that became open during 1982.

Report 83-2 is the second annual Index to Assessment Reports published since the release of Report 81-4 Index to Assessment Reports 1864-1980. The 1981 Index to Assessment Reports is Report 82-2.

All the assessment reports cited in this index have been microfilmed and can be consulted in the libraries of the Halifax and Stellarton offices of the Department. Microfiche copies of these reports can be purchased directly from Precision Microfilming Services, 6061 Young Street, Halifax, Nova Scotia, B3K 2A3 (902 455-5451). If ordering microfiche copies of assessment reports, please quote the full assessment report number from the title e.g. 11D/13B 54-I-67(01).

INDEX ORGANIZATION

Each assessment report title is a composite containing the following information:

Commodity
Location
County
Province
Exploration Company
Licensee (in brackets)
Report Title
Author
Year written
Number of Pages
Number of Maps
Map Types with scales (in brackets)
Additional enclosures e.g. drillhole logs
NSDME assessment report number

Titles of assessment reports are ordered according to the Claim Reference map system used by the Nova Scotia Department of Mines and Energy for map staking of mineral exploration claims. This Claim Reference map system is based on the National Topographic System (NTS), whereby each Claim Reference map is one-quarter of a 1:50 000 NTS map sheet (Figure 1). For example, NTS map sheet 11D/10 comprises Claim Reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, the maps being lettered in a clockwise direction from the SE corner of the 1:50 000 NTS map.

Assessment reports which fall entirely within the boundary of one Claim Reference map have their titles listed under that particular Claim Reference map. Assessment reports which fall across the boundaries of two or more Claim Reference maps have their titles listed under each one of the Claim Reference maps. For example, an exploration program conducted near Windsor (Figure 1) falls within the boundaries of Claim Reference maps 21A/16D, 21H/01A, 11E/04B and 11D/13C. In this index, the title of that particular assessment report would be listed under each one of these four Claim Reference maps. Thus, report titles are commonly listed under several different Claim Reference maps.

ASSESSMENT REPORT NUMBERS

Each assessment report is uniquely identified by an assigned report number e.g. 11D/13B 54-I-67(01), which is an alpha-numeric code consisting of the following five components: Claim Reference map; commodity; county; location; and successive report number.

11D/13B = Claim Reference map
54 = Commodity (= uranium)
I = County (= Hants County)
67 = Location (= Big Indian Lake)
(01) = Successive report number (= the first report in the assessment file 11D/13B 54-I-67)

Claim Reference Map

The Claim Reference map indicates the broad area of the Province on which the exploration assessment report is based. Only one Claim Reference map can appear in the assessment report number. When an assessment report crosses the boundaries of several Claim Reference maps, the report is still listed under each affected Claim Reference map, as explained in the secton INDEX ORGANIZATION.

Commodity

Commodity represents the primary element, mineral or rock that forms the target of the exploration activities described in the assessment report (Table 1). Assigning one commodity to an assessment report is an arbitrary decision, especially when several commodities could form the target of the exploration activities e.g. tin, tungsten and molybdenum. In such cases, although the report is identified by only one commodity in the report number, the other commodities are recorded as keywords in the GEOSCAN database, and the report can be identified under these additional commodities in the accompanying Keyword Index (explained below).

County

County represents one of the eighteen formal districts of Nova Scotia in which the assessment report is located (Table 1). For convenience, unofficial "Counties" such as Cape Breton Island, Offshore and Nova Scotia (general) have also been added to this category. Again, only one County can appear in the assessment report number. If an assessment report crosses County

boundaries, the report is identified under the additional Counties in the Keyword Index.

Location

Location represents a specific town, village, lake, stream, hill, swamp, etc. that falls within the area covered by the assessment report. A list of these locations and their corresponding number codes is on file in the Department.

Successive Report Number

The Successive Report Number (01 and onward) represents an individual, recorded assessment report assigned to that particular assessment file. In general, reports are numbered from oldest to most recent. The number (00), when used, represents a miscellaneous information category.

The complete assessment report number is therefore unique to each individual assessment report and it forms the hierarchical basis upon which this index is sorted and ordered. Hence, this index is primarily ordered by means of Claim Reference map. Within each Claim Reference map section, assessment reports are further subordered on the basis of Commodity, followed by County, followed by Location, followed by Successive Report Number.

In our Departmental libraries the microfiche copies of assessment reports are filed by means of the assessment report number. Since each assessment report title contains the assessment report number, it is a simple matter to find each report in the microfiche files.

KEYWORD INDEX

Keywords or subject terms are words abstracted from the assessment reports describing the most significant contents of the reports. For each assessment report, keywords include all the title information as well as additional terms describing map areas, map types, mineral and rock names, types of exploration surveys, drilling, chemical analyses, etc.

The microfiche Keyword Index (inside, back cover) accompanying this report is an alphabetic listing of all the keywords used to describe all of the assessment reports contained in this index. Listed below each keyword are the titles of all assessment reports containing that particular term. The Keyword Index allows the complete assessment records to be searched on any one particular keyword or subject term. For example, all assessment reports concerned with gold exploration in this index can be found listed as a series of titles below the keyword "Gold" in the alphabetic listing of keywords.

GEOSCAN

This index was prepared from magnetic tapes generated from GEOSCAN, the computer-based, national bibliographic database for geological information. GEOSCAN is operated by the National GEOSCAN Centre, Geological Survey of Canada, in cooperation with participating federal and provincial geoscience agencies, of which the Nova Scotia Department of Mines and Energy is an active participant. Specific searches and custom indexes can be generated from GEOSCAN through on-line terminal connections in the Halifax office of the Department.

ACKNOWLEDGMENTS

We thank David S. Reade and Wendy Stark of the National GEOSCAN Centre for their help in the generation of magnetic tapes from GEOSCAN. We thank Dr. Jack Garnett, Assistant Deputy Minister, Mines and Minerals Branch and Dan Murray, Director, Mineral Development Division, for their support and encouragement throughout this project. Finally we thank Kathy Mills for her editorial comments and Rita Jones for her word processing skills.
